SCHEDULE A – SCOPE OF SERVICES

1. PROJECT BACKGROUND

In 2010, the City of Surrey began construction of North America's first purpose-built covered youth park. When it opened in 2011, the Youth Park at Chuck Bailey Recreation Centre (located in Tom Binnie Park at 13458 107A Avenue) raised the bar for youth park design, function and amenity in the City of Surrey and Metro Vancouver. Growing off the success of the Chuck Bailey example, City Council has committed to building the City's second all-weather youth park, this time in the Cloverdale area.

The purpose of this RFEOI/SOQ is to short list qualified companies that will be invited to participate in Invitation to Tender process to construct the proposed works.

2. PROJECT SCOPE

The proposed location of the Cloverdale Youth Park is the northeast corner of Pacific Highway (176th Street) and 62 Avenue. This site provides a central, highly visible location in Cloverdale and is across the street from the newly completed Cloverdale Recreation Centre. The City encouraged the design team take advantage of the high traffic corridor that Pacific Highway provides to establish a bold architectural landmark on the site.

Extensive public and user group consultation led the early conceptual designs while City Staff worked closely with the design team to steer the final product. The end result is an approximately 1200 m² plaza and street-style skate and BMX park with a roof structure designed to cover approximately 525 m² of the skateable surfaces below. Connecting pathways and landscape features add another 700 m² of hard surface through the park.

The roof involves erecting five clusters of steel support columns that hold up a complex series of planar steel trusses. When placed in series, their changing profiles make up a multi-faceted modern roof design. The truss heights vary in thickness, up to 2 metres in places, and are clad on the top and sides with double-walled polycarbonate sheeting while the bottom is clad in expanded metal mesh. The metal mesh is then supported by 100 x 200mm dimensional lumber battens spaced 600mm on centre. Night lighting is also provided through overhead fixtures in the roof canopy and through step lighting in the concrete features of the park below.

3. PROJECT DELIVERABLES

The works to be tendered will include, but are not limited to, the following: demolition; site hoarding; tree removals; removal of obsolete underground services; erosion and sediment control; site preparation including bulk excavation and recontouring where necessary; shaping and grading; civil drainage works for entire site and connection to City storm; provision of new electrical service; flatwork concrete and specialized shotcrete detailing; complete construction of roof structure; supply and install of site amenities; site lighting; landscape remediation and plantings.

4. ADDITIONAL MINIMUM QUALIFICATION REQUIREMENTS

In addition to the general experience and qualification requirements outlined in section 4.2 of this RFEI/SOQ, Respondents should be able to provide the following information with respect to the performance, experience and qualifications corporate of their company and key administrative/operational personnel. The details of the additional information along with the City's corresponding minimum desired expectations are outlined below.

Either:

Respondents are to have acted as the General Contractor for at least three concrete skatepark projects within the past five years.

Or:

Respondents who have completed less than three concrete skatepark projects (including no skatepark construction experience), are to demonstrate recent experience with projects of a similar size, nature and complexity. In such cases (ie. less than three concrete skateparks) the following minimum experience requirements will apply:

- Experience acting as the General Contractor for a minimum of three completed civil projects with construction contract value of at least \$1,500,000 per project;
- Experience with precise grading of aggregates (professional running tracks, airport runways, etc);
- Experience with porous aggregates (permeable concrete base construction, etc.);
- Experience integrating exposed steel elements such as weld plates and copings into concrete surfaces and edges;
- Extensive experience with executing complex concrete formwork and subsequent concrete placement and finishing; and,
- Extensive experience placing and hand finishing shotcrete to exacting standards.

Respondents are required to provide details of the above experience with their submission. Attach additional sheets as required to demonstrate adequate relevant experience. Demonstrated relevant experience is an important component of the evaluation therefore Respondents are strongly encouraged to complete this section as thoroughly and accurately as possible.
