

# New Surrey Erosion and Sediment Control (ESC) Supervisor Portal

## Site Overview

The new ESC Supervisor portal mimics the existing online application in that it is designed around the inspection workflow as the primary focus. A major emphasis in the new portal is that it greatly expands on the information and functionality under each of the pertinent sections, giving users easy access to the information that is frequently requested, as well as what is needed to efficiently execute the duties of the ESC Supervisor.

Attached is a Site Map, providing an overview of both the new portal’s framework and what information and functionality can be found under each area.

Over the coming weeks leading up to the launch of the new portal, the City will release more detailed information about each of the portal areas and the new functionality designed to streamline how ESC Permits are managed over the permit’s lifecycle.
