

CRAFT: SKITTLES EXPERIMENT

Source: <https://www.steampoweredfamily.com/education/virtual-kids-activities/>

Supplies

White plate (medium)
Skittles
Water
Toothpick

Due to the chemical makeup of the dye in skittles, the colors do not mix when water is added – this creates a tie-dye effect!

STEP 1

Arrange skittles on a plate with a pattern/colors of their choice

STEP 2

Add water slowly (skittles should stay in their place and not float away) and watch the magic happen!
Optional: use toothpick to make swirls once the colours have done expanding
